PROJECTS

E-Commerce Store – Role: Backend Developer, Tech Stack: JavaScript, Node, MongoDB. Created an eCommerce website's backend part with multiple APIs based on products, users, carts and orders. Here uses JWT authentication for protected APIs and also uses AWS. Like Amazon and Flipkart etc.

Book Management-Role: Backend Developer, Tech Stack: JavaScript, Node, MongoDB. Create books library website where users can give review on books. Here use JWT authentication for protected APIs, uses multer with AWS to upload multiform docs. Like library-management, etc.

URL Shortner-Role: Backend Developer, Tech Stack: JavaScript, Node, MongoDB. In this project we use Redis & to shorten a long URL to a short URL. Like Bitly and TinyURL etc.

Blog Management- Role: Backend Developer, Tech Stack: JavaScript, Node, MongoDB. Create a blog website where users can write some blogs and other users can see this blog. Here use JWT authentication for protected APIs. Like One Magazine.

Open To Intern-Role: Backend Developer, Tech Stack: JavaScript, Node, MongoDB. In this project we used multer with AWS to upload multiform data. Project is all about, were Internship available and students are applying for that.
